1. Summary

I've created an e-commerce website that sells sunglasses, the brand is called Edison Alden. The e-commerce has both customer-facing and admin sections.

The theme of the website has a modern and minimalistic design, with lively use of colours.

The site is build with HTML, CSS libraries (Bootstrap) and vanilla JS.

The semester project has both been fun, but also challenging at times. I feel like I find it easy (at least esier) to grasp html, CSS and JS, but i find it a bit harder to grasp the concept of the whole deploying/server etc., so this is something I have to work on a lot more.

Through the studies I've also found JS to be a bit hard to understand, but I feel like I get it more for each time I do it. So that's promising.

2. Body

2.1. Introduction

There is some parts that's not done yet, but hopefully what I have done is okay.

2.2. Main section of report

I feel that the colors I have choosen complements each other, and the sites overall design (colorwise) is mostly natural colors – like white and black, but I used colour to bring more life to the design. So i would describe the design minimalistic (which is a often how this types of e-commerce website are), but at the same time fun and lively.

When it comes to the fonts – this is one of the things I didn't get to implement. Sorry for that.

I would probably use more time to make the products have more of the same style (like using photoshop to edit the background), but I wanted to prioritize working on the coding, as I saw the time was going to be a issue for me.

As I mention I chose to make a e-commerce website that sells sunglasses, and I feel like I met most of the criteria.

One of the things I also didn't get to finish was the part in admin section where you can toggle the product to be featured or not.

I would also feel like the coding could be a bit more structured and neatly done, so again, sorry for that.

2.3. Conclusion

Overall I am feeling ok about the website, but sadly I am missing a few things. Hopefully you can focus on the things I have done, and I will continue working on managing the time.

I found this semester project really fun and interesting, therefore it is even more devastating that I didn't get to finish it all the way.
